

How to Read System Circuit Diagram

The circuit diagram is designed so the current flows from the top of the diagram (power source) to the bottom of the diagram (ground) as if giving an image of water flow.

[A]: Fuse No.

[B]: Circuit jumping point / direction

NOTE

The circuit continues to the same symbol with the opposite direction within the page.
You will find the other symbol in the direction of the arrow.

[C]: Wire color

[D]: Shield wire

[E]: Ground point

[F]: "From" or "To" (With ID letter (s))

[G]: Specification variation

NOTE

The white arrow between A and B means "or".

[H]: "From" (With ID letter (s))

[I]: "To" (With ID letter (s))

[J]: Terminal No.

[K]: Connector code

[L]: Symbol mark

[M]: "SEE" mark
